### How to Use this Manual

This manual defines recommended operating procedures and control checklists for an ERPNext Manufacturing implementation. Exact field names, permissions and screen labels can vary by client configuration. Where a client-specific workflow differs, the approved configuration and role matrix shall prevail. Screenshots can be inserted later as implementation-specific work instructions without changing the underlying SOP controls.

### Manufacturing Control Philosophy

- Maintain one authoritative Item and BOM structure for production.
- Material movement should be traceable from source warehouse through Work In Progress to finished goods and scrap.
- Production approvals and stock transactions should follow the configured authority matrix.
- Consumption, output, scrap and rejected material should be recorded against the appropriate production transaction.
- Production costing and stock balances should be reconciled before period closure.

### SOP Index

| SOP Module / Process                           | Primary Owner                         |
|------------------------------------------------|---------------------------------------|
| 01 Manufacturing Master Data & Item Management | Manufacturing / ERPNext Administrator |
| 02 Warehouse & Stock Setup                     | Manufacturing / ERPNext Administrator |
| 03 Workstation, Operation & Routing            | Manufacturing / ERPNext Administrator |
| 04 Bill of Materials (BOM) Management          | Manufacturing / ERPNext Administrator |
| 05 Manufacturing Settings & Controls           | Manufacturing / ERPNext Administrator |
| 06 Opening Stock & Material Availability       | Stores / Manufacturing                |
| 07 Production Planning                         | Production Planner                    |
| 08 Work Order Management                       | Production Planner / Supervisor       |
| 09 Material Transfer to WIP                    | Stores / Manufacturing                |
| 10 Job Card & Operation Processing             | Production Supervisor                 |
| 11 Material Consumption & Production Entry     | Production Supervisor / Stores        |
| 12 Quality Inspection in Manufacturing         | Quality / Production                  |
| 13 Finished Goods, Scrap & Rejected Production | Production / Stores                   |
| 14 Rework & Partial Production                 | Production Supervisor                 |
| 15 Batch / Serial Number Manufacturing         | Production / Stores                   |

## SOP 01: Manufacturing Master Data & Item Management

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-01                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Ensure every raw material, packing material, semi-finished item and finished product has a complete and correctly configured Item master before manufacturing transactions begin.

### Scope

Item creation, classification, stock settings, units of measure, inventory attributes and production eligibility.

### Roles and Responsibilities

| Role                   | Responsibility                                                            |
|------------------------|---------------------------------------------------------------------------|
| Manufacturing / Stores | Provides approved item information and validates material classification. |
| ERPNext Administrator  | Creates and maintains Item masters and system mappings.                   |
| Production             | Validates production-related item attributes.                             |
| Quality                | Confirms quality-related requirements where applicable.                   |

### Prerequisites

- Approved item list and naming convention are available.
- Item Groups and Units of Measure required by the implementation exist.
- Warehouse and stock configuration are available.

### Procedure

1. Search Item records to ensure the item does not already exist.
2. Create the Item using the approved item code/name and Item Group.
3. Set the item as a stock item where it is physically stored and consumed.
4. Maintain the approved stock UOM and required alternate UOMs.
5. Configure batch or serial tracking where required.
6. Review default warehouse and valuation-related settings where applicable.
7. Verify item status and production eligibility before using the item in a BOM.
8. Save and independently review critical item attributes.

Controls and Exceptions

- Do not create duplicate items to correct naming or mapping problems.
- Do not change UOM or stock-tracking rules after transactions exist without impact assessment.
- Inactive items should not be used for new production transactions.

Checklist

| ✓ Check Point                                                            | Status | Remarks |
|--------------------------------------------------------------------------|--------|---------|
| <input type="checkbox"/> Unique Item Code/name verified                  |        |         |
| <input type="checkbox"/> Correct Item Group                              |        |         |
| <input type="checkbox"/> Stock Item setting verified                     |        |         |
| <input type="checkbox"/> UOM verified                                    |        |         |
| <input type="checkbox"/> Batch/Serial settings verified where applicable |        |         |

| <input type="checkbox"/> Production eligibility verified                 |        |         |
| <input type="checkbox"/> Independent review completed                    |        |         |

## SOP 02: Warehouse & Stock Setup

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-02                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Ensure manufacturing warehouses are correctly structured so raw materials, work-in-progress, finished goods and scrap are physically and systemically traceable.

### Scope

Warehouse creation, hierarchy, account mapping where applicable, and manufacturing stock movement.

### Roles and Responsibilities

| Role                  | Responsibility                                               |
|-----------------------|--------------------------------------------------------------|
| Stores                | Defines physical warehouse structure and material locations. |
| ERPNext Administrator | Creates and maintains warehouse masters.                     |
| Accounts              | Validates accounting mappings where applicable.              |
| Production            | Confirms WIP and finished-goods flow.                        |

### Prerequisites

- Approved warehouse structure is available.
- Company and stock configuration are established.
- Required warehouse permissions are assigned.

### Procedure

9. Create or validate the required warehouses and warehouse groups.
10. Maintain separate logical locations for raw material, WIP, finished goods and scrap where the process requires them.
11. Verify company mapping and account settings where applicable.
12. Review warehouse naming and hierarchy for consistency.
13. Confirm users have access only to required warehouses.
14. Validate stock movement between source, WIP and finished-goods warehouses.

## SOP 03: Workstation, Operation & Routing

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-03                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Define the production operations and resources required to execute manufacturing in a controlled sequence.

### Scope

Workstations, operations, operation timings and routing sequence.

### Roles and Responsibilities

| Role                  | Responsibility                                         |
|-----------------------|--------------------------------------------------------|
| Production            | Defines production sequence and resource requirements. |
| Production Supervisor | Validates practical operation steps and timings.       |
| ERPNext Administrator | Configures Workstations, Operations and Routings.      |

### Prerequisites

- Production process and operation sequence are approved.
- Required Workstations exist or are ready to be created.
- Standard operation timings are available where used.

### Procedure

15. Create or review Workstations used for production.
16. Define Operations with clear operation names and instructions.
17. Configure workstation assignment and standard timings where applicable.
18. Create Routing in the required production sequence.
19. Review operation dependencies and sequence.
20. Validate that the Routing can be selected in the applicable BOM or Work Order flow.
21. Test the routing before production use.

## SOP 04: Bill of Materials (BOM) Management

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-04                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Maintain an approved BOM that defines the materials, quantities and operations required to manufacture an item.

### Scope

BOM creation, component quantities, UOM, operations, scrap and BOM version control.

### Roles and Responsibilities

| Role                   | Responsibility                           |
|------------------------|------------------------------------------|
| Production Engineering | Defines and approves BOM structure.      |
| Production             | Validates manufacturing feasibility.     |
| Stores                 | Validates material availability and UOM. |
| ERPNext Administrator  | Maintains BOM records and permissions.   |

### Prerequisites

- Finished item exists.
- Component items exist.
- Approved quantities and UOMs are available.
- Routing/operations are available where required.

### Procedure

- Create the BOM for the finished item.
- Select the correct BOM items and quantities.
- Verify component UOM and stock UOM conversion where applicable.
- Add operations and operation timings when the process requires them.
- Configure scrap or process-loss quantities only from approved production rules.
- Review total component quantities and expected output.
- Submit and approve the BOM according to the configured process.
- Set the correct active/default BOM where multiple BOMs exist.

## SOP 05: Manufacturing Settings & Controls

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-05                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Ensure Manufacturing settings, permissions and system controls are configured before production transactions begin.

### Scope

Manufacturing Settings, stock settings, naming, permissions and production controls.

### Roles and Responsibilities

| Role                  | Responsibility                                |
|-----------------------|-----------------------------------------------|
| Process Owner         | Approves manufacturing rules.                 |
| ERPNext Administrator | Configures system settings.                   |
| Stores / Production   | Validates operational behavior.               |
| Accounts              | Validates accounting impact where applicable. |

### Prerequisites

- Manufacturing process is approved.
- Company, warehouse and stock settings are configured.
- Roles and permissions are defined.

### Procedure

30. Review Manufacturing Settings and related Stock Settings.
31. Confirm default warehouses and required production controls.
32. Review naming series for manufacturing documents.
33. Configure permissions for Production Planner, Supervisor, Stores, Quality and Accounts roles as applicable.
34. Validate cancellation/amendment permissions.
35. Confirm stock and accounting settings required by the implementation.
36. Perform a controlled end-to-end test before go-live.

The screenshot displays the 'Manufacturing Settings' page in ERPNext. The left sidebar shows navigation options like 'Assigned To', 'Attachments', and 'Share'. The main content area is divided into sections: 'BOM and Production' (selected) and 'Job Card and Capacity Planning'. Under 'BOM and Production', there are three sub-sections: 'Raw Materials Consumption' with checkboxes for 'Allow Continuous Material Consumption' and 'Validate Components and Quantities Per BOM'; 'BOM' with a checkbox for 'Update BOM Cost Automatically'; and 'Default Warehouses for Production' with input fields for 'Default Work In Progress Warehouse', 'Default Scrap Warehouse', and 'Default Finished Goods Warehouse'.

Controls and Exceptions

- Production users should not receive unnecessary administrator access.
- Settings affecting valuation or stock should be changed only through approved change control.
- Production configuration should be tested before use.

Checklist

| ✓ Check Point                                                | Status | Remarks |

## SOP 06: Opening Stock & Material Availability

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-06                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Ensure required raw materials and production inputs are available in the correct warehouses before production starts.

### Scope

Opening stock, stock reconciliation and material availability.

### Roles and Responsibilities

| Role                  | Responsibility                                    |
|-----------------------|---------------------------------------------------|
| Stores                | Owns physical stock verification and stock entry. |
| Production            | Confirms required materials.                      |
| Accounts              | Validates valuation impact.                       |
| ERPNext Administrator | Supports configuration and correction.            |

### Prerequisites

- Physical stock count is approved.
- Items and warehouses are configured.
- Opening stock process is approved.

### Procedure

37. Verify physical stock quantities.
38. Record opening stock through the approved ERPNext stock process.
39. Assign batch/serial details where applicable.
40. Verify warehouse quantities after posting.
41. Compare ERPNext stock with physical records.
42. Resolve material discrepancies before production begins.

### Controls and Exceptions

- Do not adjust stock merely to force production availability.
- Batch/serial quantities must remain traceable.
- Opening stock corrections require approved evidence.

### Checklist

| ✓ Check Point                                          | Status | Remarks |
|--------------------------------------------------------|--------|---------|
| <input type="checkbox"/> Physical stock verified       |        |         |
| <input type="checkbox"/> Correct warehouse used        |        |         |
| <input type="checkbox"/> Batch/serial details verified |        |         |
| <input type="checkbox"/> Opening stock posted          |        |         |
| <input type="checkbox"/> ERPNext balance reconciled    |        |         |
| <input type="checkbox"/> Discrepancies resolved        |        |         |

SOP 07: Production Planning

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-07                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

Purpose

Convert approved production requirements into planned manufacturing demand and Work Orders.

Scope

Production Plan, demand, source documents, item selection and Work Order creation.

Roles and Responsibilities

| Role                  | Responsibility                         |
|-----------------------|----------------------------------------|
| Production Planner    | Creates and manages production plans.  |
| Sales / Planning      | Provides approved production demand.   |
| Stores                | Confirms material availability.        |
| ERPNext Administrator | Supports configuration and exceptions. |

Prerequisites

- Production demand is approved.
- Active BOM exists.
- Required items and warehouses are configured.
- Material availability can be reviewed.

Procedure

43. Create the Production Plan according to the approved demand.
44. Select the required production items and quantities.
45. Fetch or select the applicable BOM.
46. Review required raw materials and source warehouses.
47. Check material availability and identify shortages.
48. Generate Work Orders for the approved plan.
49. Review the generated Work Orders before production release.

## SOP 08: Work Order Management

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-08                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Control production execution through approved Work Orders that define the item, quantity, BOM, operations and material requirements.

### Scope

Work Order creation, release, material requirements, production quantity and completion.

### Roles and Responsibilities

| Role                  | Responsibility                |
|-----------------------|-------------------------------|
| Production Planner    | Creates/releases Work Orders. |
| Production Supervisor | Executes production.          |
| Stores                | Provides material.            |
| ERPNext Administrator | Supports system exceptions.   |

### Prerequisites

- Approved Production Plan or production requirement exists.
- BOM is active.
- Required warehouses and operations are available.

### Procedure

50. Create or review the Work Order for the finished item.
51. Verify quantity, BOM, source warehouse, WIP warehouse and target warehouse.
52. Review required operations and materials.
53. Check material availability.
54. Release the Work Order according to production readiness.
55. Transfer required materials to WIP where the process requires it.
56. Monitor production progress and outstanding quantity.
57. Close the Work Order after production is completed or formally stopped.

**Controls and Exceptions**

- Do not edit critical Work Order fields after dependent transactions without impact assessment.
- Work Order completion should match actual production.
- Unconsumed or excess materials should be reconciled.

**Checklist**

| ✓ Check Point                                          | Status | Remarks |

## SOP 09: Material Transfer to WIP

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-09                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Move required production materials from stores to the approved Work In Progress location with full stock traceability.

### Scope

Material transfer for manufacture, source and target warehouses, batch/serial tracking and reconciliation.

### Roles and Responsibilities

| Role       | Responsibility                   |
|------------|----------------------------------|
| Stores     | Transfers and records materials. |
| Production | Confirms material requirement.   |
| Supervisor | Confirms receipt into WIP.       |

### Prerequisites

- Released Work Order exists.
- Required material is available.
- Source and WIP warehouses are correct.

### Procedure

- Open the material transfer transaction linked to the Work Order.
- Verify source warehouse and WIP warehouse.
- Transfer the required materials and quantities.
- Select correct batch/serial numbers where applicable.
- Submit the stock transaction.
- Verify source stock reduction and WIP stock increase.
- Reconcile transferred quantities with Work Order requirements.

### Controls and Exceptions

- Do not transfer material to an unapproved WIP warehouse.
- Batch/serial selections must match physical material.
- Excess transfers should be corrected through controlled stock transactions.

### Checklist

| ✓ Check Point                                        | Status | Remarks |
|------------------------------------------------------|--------|---------|
| <input type="checkbox"/> Work Order linked           |        |         |
| <input type="checkbox"/> Source warehouse verified   |        |         |

| <input type="checkbox"/> WIP balance reconciled      |        |         |

## SOP 10: Job Card & Operation Processing

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-10                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Record the execution of production operations, including work performed, time and operation status.

### Scope

Job Cards, operation sequence, employees/resources, time logs and operation completion.

### Roles and Responsibilities

| Role                  | Responsibility                   |
|-----------------------|----------------------------------|
| Production Supervisor | Assigns and monitors operations. |
| Operator              | Records work performed.          |
| ERPNext Administrator | Supports configuration.          |

### Prerequisites

- Work Order and operations are available.
- Workstations are configured.
- Operators/users are authorised.

### Procedure

65. Create or review Job Cards generated from the Work Order.
66. Verify the operation and workstation.
67. Record employee/operator and actual work time where required.
68. Update operation status as work progresses.
69. Record completed quantity or relevant production information.
70. Complete the Job Card after the operation is finished.
71. Review incomplete Job Cards before Work Order closure.

The screenshot shows the 'New Job Card' form in ERPNext. The form is titled 'New Job Card' with a 'Not Saved' status and a 'Save' button. It has tabs for 'Details', 'Operation & Workstation', 'Raw Materials', 'Scrap Items', and 'More Information'. The 'Details' tab is active, showing fields for Naming Series (PO-JOB.#####), Posting Date (17-09-2026), Work Order, Company, Employee, Qty To Manufacture, Total Completed Qty (0), Expected Start Date, Expected End Date, and Expected Time Required (In Mins).

Controls and Exceptions

- Do not mark operations complete without production confirmation.
- Actual time should be recorded according to the approved process.
- Incomplete operations must be resolved before final closure.

Checklist

| ✓ Check Point                                        | Status | Remarks |

## SOP 11: Material Consumption & Production Entry

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-11                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Record actual material consumption and finished production so stock and manufacturing records reflect the physical process.

### Scope

Material consumption, manufacture entry, finished goods, source/WIP/target warehouses and actual quantities.

### Roles and Responsibilities

| Role                  | Responsibility                             |
|-----------------------|--------------------------------------------|
| Production Supervisor | Confirms actual consumption and output.    |
| Stores                | Verifies stock movement.                   |
| Accounts              | Reviews valuation impact where applicable. |
| ERPNext Administrator | Supports exceptions.                       |

### Prerequisites

- Work Order is active.
- Required materials are available or transferred to WIP.
- Finished goods warehouse is ready.

### Procedure

72. Open the production/manufacture transaction from the Work Order.
73. Verify the finished item and actual production quantity.
74. Review consumed materials against actual usage.
75. Update actual quantities only where supported by production records.
76. Select batch/serial numbers where required.
77. Confirm source/WIP and finished-goods warehouses.
78. Submit the manufacture entry.
79. Verify stock balances and Work Order progress after posting.

### Controls and Exceptions

- Do not record planned consumption as actual without confirmation.
- Avoid duplicate manufacture entries.
- Material and finished goods quantities must reconcile with the physical production.

### Checklist

## SOP 12: Quality Inspection in Manufacturing

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-12                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Ensure required quality checks are completed and recorded before affected material is accepted for the next production or stock stage.

### Scope

Quality inspection, acceptance/rejection, reference transactions and production release.

### Roles and Responsibilities

| Role       | Responsibility                                 |
|------------|------------------------------------------------|
| Quality    | Performs and approves inspections.             |
| Production | Provides samples/material and acts on results. |
| Stores     | Maintains material segregation where required. |

### Prerequisites

- Quality parameters and inspection process are approved.
- Relevant items and transactions are available.
- Quality permissions are configured.

### Procedure

80. Identify the material or production transaction requiring inspection.
81. Create the Quality Inspection against the applicable reference.
82. Record the required test results and observations.
83. Mark the inspection according to the approved acceptance criteria.
84. Release accepted material to the next stage where applicable.
85. Segregate rejected material and initiate the approved disposition process.
86. Retain inspection records for traceability.

### Controls and Exceptions

- Rejected material must not be released as accepted stock.
- Quality decisions should be recorded by authorised users.
- Inspection records should remain linked to the relevant material/production transaction.

### Checklist

| ✓ Check Point                                           | Status | Remarks |

| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-13                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Ensure finished goods, scrap and rejected output are recorded in the correct stock locations and remain traceable to production.

### Scope

Finished goods receipt, scrap, rejected production and stock reconciliation.

### Roles and Responsibilities

| Role       | Responsibility                                    |
|------------|---------------------------------------------------|
| Production | Confirms output and scrap quantities.             |
| Stores     | Receives and segregates stock.                    |
| Quality    | Determines rejected disposition where applicable. |

### Prerequisites

- Production transaction is ready.
- Finished goods and scrap locations are defined.
- Quality disposition is available where required.

### Procedure

87. Confirm actual finished quantity.
88. Record finished goods into the approved finished-goods warehouse.
89. Record scrap quantity and destination according to the approved process.
90. Record rejected production separately where required.
91. Apply batch/serial tracking where applicable.
92. Verify total quantities against the production transaction.
93. Investigate unexplained quantity differences before closure.

### Controls and Exceptions

- Scrap must not be hidden inside finished goods.
- Rejected stock must remain segregated until disposition.
- Quantity differences require investigation and documented correction.

### Checklist

| ✓ Check Point                                                      | Status | Remarks |

## SOP 14: Rework & Partial Production

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-14                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Control production that is completed partially or requires additional processing without losing material and production traceability.

### Scope

Partial Work Order completion, rework, additional operations and quantity reconciliation.

### Roles and Responsibilities

| Role                  | Responsibility                              |
|-----------------------|---------------------------------------------|
| Production Supervisor | Controls rework and partial completion.     |
| Quality               | Approves rework/disposition where required. |
| Stores                | Tracks material movement.                   |

### Prerequisites

- Reason for partial production or rework is documented.
- Affected Work Order is identified.
- Required approval is available.

### Procedure

94. Identify the affected Work Order.
95. Record the quantity actually completed.
96. Keep the remaining quantity open where further production is required.
97. For rework, record the approved additional operation or production action.
98. Move or consume materials through controlled stock transactions.
99. Perform required quality inspection after rework.
100. Close the Work Order only after final quantity and exceptions are reconciled.

### Controls and Exceptions

- Do not close a Work Order merely to remove it from pending lists.
- Rework should not create duplicate finished goods.
- Additional material consumption must be traceable.

### Checklist

| ✓ Check Point                                        | Status | Remarks |
|------------------------------------------------------|--------|---------|
| <input type="checkbox"/> Reason documented           |        |         |
| <input type="checkbox"/> Completed quantity verified |        |         |
| <input type="checkbox"/> Remaining quantity tracked  |        |         |
| <input type="checkbox"/> Rework action approved      |        |         |
| <input type="checkbox"/> Additional material tracked |        |         |

|                                                         |  |  |
|---------------------------------------------------------|--|--|
| <input type="checkbox"/> Quality recheck completed      |  |  |
| <input type="checkbox"/> Final reconciliation completed |  |  |

## SOP 15: Batch / Serial Number Manufacturing

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-15                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Maintain batch and serial traceability throughout manufacturing where item tracking is required.

### Scope

Batch/serial assignment, consumption, production output and traceability.

### Roles and Responsibilities

| Role                  | Responsibility                              |
|-----------------------|---------------------------------------------|
| Stores                | Maintains batch/serial stock.               |
| Production            | Records actual material/output identifiers. |
| Quality               | Uses traceability during inspection.        |
| ERPNext Administrator | Maintains tracking configuration.           |

### Prerequisites

- Batch/serial tracking is enabled for applicable items.
- Numbering rules are approved.
- Stock locations are configured.

### Procedure

101. Verify tracking requirements for each relevant item.
102. Select the correct batch/serial numbers during material consumption.
103. Assign or create batch/serial numbers for finished production as configured.
104. Confirm identifiers are recorded in stock transactions.
105. Trace finished output back to consumed material where required.
106. Review batch/serial balances after production.

### Controls and Exceptions

- Never reuse a serial number.
- Do not select an incorrect batch to complete a transaction.
- Traceability gaps must be investigated before release.

### Checklist

| ✓ Check Point                                            | Status | Remarks |
|----------------------------------------------------------|--------|---------|
| <input type="checkbox"/> Tracking configuration verified |        |         |
| <input type="checkbox"/> Correct batch/serial selected   |        |         |
| <input type="checkbox"/> Finished batch/serial created   |        |         |
| <input type="checkbox"/> Identifiers recorded            |        |         |
| <input type="checkbox"/> Traceability checked            |        |         |
| <input type="checkbox"/> Balances reconciled             |        |         |

## SOP 16: Manufacturing Cost & Stock Verification

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-16                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Verify that manufacturing transactions produce consistent stock quantities and appropriate manufacturing cost information.

### Scope

Stock valuation, material consumption, finished goods valuation, variance review and accounting impact.

### Roles and Responsibilities

| Role                  | Responsibility                               |
|-----------------------|----------------------------------------------|
| Manufacturing         | Reviews production quantities and variances. |
| Stores                | Confirms physical stock.                     |
| Accounts              | Reviews valuation and accounting entries.    |
| ERPNext Administrator | Investigates system-level discrepancies.     |

### Prerequisites

- Production transactions are posted.
- Stock ledger and relevant accounting reports are accessible.
- Physical reconciliation data is available.

### Procedure

107. Review material consumption against production output.
108. Check finished goods and scrap quantities.
109. Review stock ledger entries for the relevant warehouses.
110. Review valuation or manufacturing cost information according to the configured costing method.
111. Compare production records with physical stock.
112. Investigate unexplained variances.
113. Document approved adjustments and corrections.

### Controls and Exceptions

- Do not change stock or valuation merely to hide a variance.
- Accounting corrections should follow approved financial controls.
- Large or recurring variances require root-cause analysis.

### Checklist

| ✓ Check Point                                      | Status | Remarks |
|----------------------------------------------------|--------|---------|

| <input type="checkbox"/> Stock ledger reviewed     |        |         |

|                                                  |  |  |
|--------------------------------------------------|--|--|
| <input type="checkbox"/> Cost/valuation reviewed |  |  |
| <input type="checkbox"/> Variances investigated  |  |  |
| <input type="checkbox"/> Corrections documented  |  |  |

## SOP 17: Manufacturing Reports & Closure

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-17                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Ensure manufacturing activity is reviewed, reconciled and formally closed for the required period.

### Scope

Production reports, Work Order status, stock reconciliation, pending operations and period closure.

### Roles and Responsibilities

| Role                  | Responsibility                                |
|-----------------------|-----------------------------------------------|
| Production Manager    | Reviews production completion and exceptions. |
| Stores                | Reconciles stock.                             |
| Accounts              | Reviews financial impact.                     |
| ERPNext Administrator | Supports reports and system controls.         |

### Prerequisites

- Period cut-off is communicated.
- Production transactions are posted or identified as pending.
- Required reports are available.

### Procedure

114. Review open Work Orders and pending Job Cards.
115. Review production quantities and material consumption.
116. Review finished goods, scrap and rejected quantities.
117. Review stock balances and relevant stock ledger entries.
118. Review manufacturing cost and accounting impact where applicable.
119. Identify unresolved exceptions.
120. Complete approved corrections before closure.
121. Obtain responsible-owner sign-off for period closure.

### Controls and Exceptions

- Do not close a period with material unresolved stock discrepancies.
- Retrospective changes after closure require approved exception handling.
- Retain closure evidence for audit.

### Checklist

| ✓ Check Point                                          | Status | Remarks |

## SOP 18: Manufacturing Exception & Troubleshooting

|                |                              |                |                                       |
|----------------|------------------------------|----------------|---------------------------------------|
| Document       | QBS Manufacturing SOP Manual | Version        | 1.0                                   |
| SOP Code       | QBS-MFG-18                   | Process Owner  | Manufacturing / ERPNext Administrator |
| Effective Date | To be approved               | Review Cycle   | Annual / on major system change       |
| Frequency      | As required                  | Classification | Internal Use                          |

### Purpose

Provide a structured diagnostic path so manufacturing issues are corrected at the correct layer without creating secondary stock or production errors.

### Scope

Common issues involving item/BOM setup, material availability, Work Orders, stock movement, Job Cards, production entries, quality and traceability.

### Roles and Responsibilities

| Role                  | Responsibility                                                |
|-----------------------|---------------------------------------------------------------|
| Operator/User         | Reports exact issue and transaction details.                  |
| Production/Stores     | Validates physical and process conditions.                    |
| ERPNext Administrator | Diagnoses configuration and application issues.               |
| IT/Developer          | Fixes approved infrastructure or code defects where required. |

### Prerequisites

- Issue ID, transaction number, item and date/time are captured.
- Recent configuration or code changes are known.

### Procedure

122. Classify the issue as master data, configuration, permission, stock, production, quality, integration or application error.
123. Check the source transaction and linked Work Order.
124. Verify Item, BOM, warehouse and operation configuration.
125. Trace stock movement from source warehouse through WIP to finished goods.
126. Check batch/serial details where applicable.
127. Review error messages before attempting corrections.
128. Correct the root cause through the approved process.
129. Retest the original transaction scenario.
130. Reconcile stock and production quantities after correction.
131. Document root cause and preventive action for recurring issues.

### Controls and Exceptions

- Do not directly edit database records when the root cause is unknown.
- Do not cancel or repost stock blindly.
- Bulk corrections require backup, controlled testing and reconciliation.

### Checklist

| ✓ Check Point                                       | Status | Remarks |
