STANDARD OPERATING PROCEDURE MANUAL

[Website Settings](#) | [Web Pages](#) | [Blog](#) | [Web Forms](#) | [Product Publishing](#) | [SEO](#) | [Portal Access](#) | [Analytics](#)

Version 1.0 | September 2026
Prepared for QBS Website Module implementations
Internal controlled working document

Document Control

Document Title	QBS Website Module SOP Manual	Version	1.0
Document Owner	Website / Marketing Process Owner	Prepared By	Q10 Analytics Pvt. Ltd.
Approved By		Effective Date	
Review Cycle	Annual / major release	Classification	Internal Use
Supersedes	New document	Next Review	

How to Use this Manual

This manual defines recommended operating procedures and control checklists for an QBS Website Module implementation. Exact field names, permissions and screen labels can vary by client configuration. Where a client-specific workflow differs, the approved configuration and role matrix shall prevail. Screenshots can be inserted later as implementation-specific work instructions without changing the underlying SOP controls.

Website Module Control Philosophy

- One authoritative Website Settings configuration governing branding, navigation and defaults across the site.
- Content should always pass through an approved draft-review-approve-publish workflow before going live.
- Approvals follow the configured content and technical authority matrix; direct publishing should not bypass workflow.
- Domain, SSL and security-related changes are made in a controlled maintenance window with an audit trail.
- Website performance, uptime and content accuracy are monitored and reviewed on a regular cadence.

SOP Index

SOP	Module / Process	Primary Owner
01	Website Settings & Configuration	Website Administrator
02	Domain, SSL & Branding Setup	IT/System Administrator
03	Web Page Management	Website Administrator
04	Blog Management	Website Administrator / Marketing Team
05	Web Form Management	Website Administrator
06	Website Navigation & Menu Management	Website Administrator
07	Product / Item Publishing to Website	Website Administrator / Sales Team
08	Website Content Approval Workflow	Website Administrator / Marketing
09	SEO & Metadata Management	Website Administrator / Marketing Team
10	Website User & Portal Access Management	Website Administrator
11	Website Approval Matrix	Website Administrator
12	Website Analytics & Monitoring	Website Administrator / Marketing Team
13	Website Exception & Troubleshooting	Website Administrator

SOP 01: Website Settings & Configuration

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-01	Process Owner	Website Administrator
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Ensure the Website module is configured with approved defaults (home page, banner, footer, brand) before content goes live.

Scope

Website Settings (title, description, home page, banner image, footer items, favicon) and global module-level configuration.

Roles and Responsibilities

Role	Responsibility
Website Administrator	Configures Website Settings.
Marketing / Process Owner	Approves branding and content standards.
IT/System Administrator	Applies role-based access.

Prerequisites

- Approved brand guidelines (logo, colors, fonts) exist.
- Domain and hosting details are finalised.

Procedure

1. Review Website Settings for site title, tagline and meta description.
2. Set the approved Home Page and confirm it renders correctly.
3. Upload approved favicon, logo and banner images per brand guidelines.
4. Configure footer items (address, social links, copyright text).
5. Set the default language and enable/disable multi-language support as required.
6. Configure Google Analytics/Search Console integration where approved.
7. Validate settings on a staging/test site before publishing to production.
8. Document configuration decisions in the change log.

Controls and Exceptions

- Do not change global Website Settings without Marketing/Process Owner approval; changes affect all published pages.
- Branding assets must match approved brand guidelines before upload.
- Test configuration changes on staging before applying to the live site.

Checklist

✓	Check Point	Status / Remarks
☐	Site title/description reviewed.	
☐	Home page confirmed correct.	
☐	Branding assets uploaded per guidelines.	
☐	Footer items configured.	
☐	Analytics integration verified.	
☐	Settings tested on staging.	
☐	Change documented.	

SOP 02: Domain, SSL & Branding Setup

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-02	Process Owner	IT/System Administrator
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Ensure the website is accessible on the correct domain with a valid SSL certificate and consistent branding.

Scope

Domain mapping, SSL certificate installation/renewal, custom domain configuration, brand asset management.

Roles and Responsibilities

Role	Responsibility
IT/System Administrator	Configures domain and SSL.
Website Administrator	Confirms branding consistency across pages.
Marketing Team	Approves brand assets.

Prerequisites

- Domain is registered and DNS access is available.
- SSL certificate (or auto-SSL provider) is arranged.

Procedure

1. Map the custom domain to the website instance via DNS (CNAME/A record).
2. Install and validate the SSL certificate; confirm HTTPS redirection is enforced.
3. Set up a certificate renewal reminder/auto-renewal where supported.
4. Verify the domain resolves correctly from multiple networks/devices.
5. Confirm branding (logo, favicon, colors) is consistent across all pages.
6. Test the website on desktop and mobile viewports.
7. Record domain/SSL renewal dates in the tracking log.

Controls and Exceptions

- SSL certificates must be renewed before expiry to avoid downtime/browser warnings.
- Domain/DNS changes must be tested in a maintenance window to avoid site downtime.
- Branding changes should go through Marketing Team review before publishing.

Checklist

✓	Check Point	Status / Remarks
☐	Domain correctly mapped.	
☐	SSL certificate valid and enforced.	
☐	Renewal reminder set.	
☐	Site tested on desktop/mobile.	
☐	Branding consistency verified.	
☐	Renewal dates logged.	

SOP 03: Web Page Management

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-03	Process Owner	Website Administrator
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Ensure web pages are created, reviewed and published with accurate, approved content.

Scope

Web Page creation, content editing, publishing/unpublishing, page hierarchy.

Roles and Responsibilities

Role	Responsibility
Content Author	Drafts web page content.
Website Administrator	Reviews and publishes pages.
Marketing / Process Owner	Approves final content.

Prerequisites

- Approved content/copy is available.
- Page URL/route naming convention is defined.

Procedure

1. Create the Web Page with an approved title and URL route (slug).
2. Draft content using the page builder/HTML editor per the approved copy.
3. Add images/media, ensuring proper alt text and compressed file sizes.
4. Set the page meta title and meta description for SEO.
5. Preview the page on staging before publishing.
6. Route the draft for content approval where required.
7. Publish the page and verify it renders correctly on the live site.
8. Review published pages periodically for outdated content.

Controls and Exceptions

- Pages should not be published without content review/approval.
- Broken links or missing images must be fixed before publishing.
- URL routes should not be changed after publishing without a redirect in place.

Checklist

✓	Check Point	Status / Remarks
☐	Title and URL route approved.	
☐	Content reviewed against approved copy.	
☐	Images optimised with alt text.	
☐	Meta title/description set.	
☐	Page previewed on staging.	
☐	Published and verified live.	

SOP 04: Blog Management

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-04	Process Owner	Website Administrator / Marketing Team
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Ensure blog posts are published consistently with quality content and proper categorisation.

Scope

Blog Post creation, Blog Category management, author assignment, publishing schedule.

Roles and Responsibilities

Role	Responsibility
Blog Author	Drafts blog content.
Website Administrator	Reviews and publishes posts.
Marketing Team	Plans content calendar and approves posts.

Prerequisites

- Content calendar/topic is approved.
- Blog Category structure exists.

Procedure

1. Create the Blog Post under the correct Blog Category.
2. Draft content with an approved title, featured image and body copy.
3. Set the author, publish date and meta description.
4. Proofread content for grammar, tone and factual accuracy.
5. Preview the post on staging before publishing.
6. Route the draft for Marketing Team approval where required.
7. Publish the post per the content calendar schedule.
8. Promote the published post via configured social share settings.
9. Review post performance (views, comments) periodically.

Controls and Exceptions

- Blog posts should not be published without proofreading and approval.
- Featured images must be properly licensed/owned.
- Comments (if enabled) should be moderated before public display.

Checklist

✓	Check Point	Status / Remarks
☐	Correct Blog Category assigned.	
☐	Title, image and body reviewed.	
☐	Author and publish date set.	
☐	Meta description added.	
☐	Approved before publishing.	
☐	Published per content calendar.	

SOP 05: Web Form Management

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-05	Process Owner	Website Administrator
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Ensure web forms (contact, enquiry, registration, etc.) are configured correctly and submissions are routed and actioned.

Scope

Web Form creation, field configuration, submission routing, response tracking.

Roles and Responsibilities

Role	Responsibility
Website Administrator	Configures Web Forms.
Department Owner	Defines required fields and receives submissions.
IT/System Administrator	Configures notification/integration settings.

Prerequisites

- Approved form fields and purpose are defined.
- Notification recipients/routing rules are agreed.

Procedure

1. Create the Web Form with the approved title and doctype linkage.
2. Configure required and optional fields per the approved specification.
3. Set up validation rules (mandatory fields, format checks) as needed.
4. Configure email notifications to the correct department/owner on submission.
5. Test the form end-to-end by submitting sample data on staging.
6. Publish the form and link it from the relevant web page(s).
7. Monitor submissions and confirm timely follow-up by the owning department.
8. Review spam/invalid submissions and adjust validation/captcha as needed.

Controls and Exceptions

- Forms collecting personal data must comply with the organisation's privacy policy.
- Notification routing must be tested before go-live to avoid missed submissions.
- Spam protection (captcha) should be enabled on public-facing forms.

Checklist

✓	Check Point	Status / Remarks
☐	Fields configured per specification.	
☐	Validation rules tested.	
☐	Notifications routed correctly.	
☐	Form tested end-to-end on staging.	
☐	Published and linked from relevant pages.	
☐	Submissions monitored for follow-up.	

SOP 06: Website Navigation & Menu Management

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-06	Process Owner	Website Administrator
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Ensure website navigation is structured logically and kept current as pages are added or retired.

Scope

Top navigation bar, footer menu, breadcrumbs, internal linking structure.

Roles and Responsibilities

Role	Responsibility
Website Administrator	Maintains navigation/menu structure.
Marketing Team	Approves navigation changes affecting user journeys.

Prerequisites

- Approved site map/information architecture exists.

Procedure

1. Review the approved site map before adding/removing a navigation item.
2. Add the new menu item with the correct label, URL and parent/child hierarchy.
3. Verify the menu item renders correctly across desktop and mobile navigation.
4. Update breadcrumb configuration where the page hierarchy changes.
5. Remove or redirect menu items for pages being retired.
6. Test all navigation links for accuracy after any structural change.
7. Review navigation periodically against site analytics for usability improvements.

Controls and Exceptions

- Navigation changes should not be made without following the approved site map.
- Removing a menu item for a live page requires a redirect to avoid broken links.
- Test navigation on both desktop and mobile before publishing changes.

Checklist

✓	Check Point	Status / Remarks
☐	Menu structure matches approved site map.	
☐	New items tested on desktop/mobile.	
☐	Breadcrumbs updated where applicable.	
☐	Retired pages redirected.	
☐	All links tested after changes.	
☐	Periodic navigation review completed.	

SOP 07: Product / Item Publishing to Website

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-07	Process Owner	Website Administrator / Sales Team
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Ensure items/products from the Item master are published to the website accurately for catalogue or e-commerce display.

Scope

"Publish in Website" flag, product images, description, pricing display, item groups shown on site.

Roles and Responsibilities

Role	Responsibility
Website Administrator	Publishes and maintains product listings.
Stock / Sales Team	Confirms item master accuracy before publishing.
Marketing Team	Approves product content and images.

Prerequisites

- Item master exists and is approved.
- Approved product images and descriptions are available.

Procedure

1. Confirm the item to be published exists and is approved in the Item master.
2. Enable the "Publish in Website" flag on the item.
3. Upload approved product images and write an accurate web description.
4. Set the website item group/category for correct catalogue placement.
5. Verify pricing/availability displayed matches the approved price list.
6. Preview the product page on staging before publishing.
7. Publish and verify the product appears correctly in the website catalogue/search.
8. Review published product listings periodically for accuracy and stock status.

Controls and Exceptions

- Do not publish an item to the website before it is approved in the Item master.
- Pricing shown on the website must be reconciled with the approved price list.
- Discontinued items must be unpublished or clearly marked, not left live with stale data.

Checklist

✓	Check Point	Status / Remarks
☐	Item approved in Item master before publishing.	
☐	Publish flag enabled correctly.	
☐	Images and description approved.	
☐	Website item group set correctly.	
☐	Pricing verified against price list.	
☐	Published listing reviewed periodically.	

SOP 08: Website Content Approval Workflow

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-08	Process Owner	Website Administrator / Marketing
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Ensure all website content changes pass through a defined review and approval process before going live.

Scope

Draft-review-approve-publish workflow for Web Pages, Blog Posts, Web Forms and product listings.

Roles and Responsibilities

Role	Responsibility
Content Author	Submits content for review.
Website Administrator	Performs technical/quality review.
Marketing / Process Owner	Gives final approval.

Prerequisites

- Approval workflow and reviewer roles are configured in the system.

Procedure

- Content Author creates content in Draft status.
- Submit the draft for review, attaching any supporting reference material.
- Website Administrator reviews for technical accuracy (links, formatting, SEO fields).
- Marketing/Process Owner reviews for brand, tone and factual accuracy.
- Approve or return the content with specific comments for revision.
- Publish only after all required approvals are recorded.
- Log approval history for audit purposes.
- Periodically audit a sample of published content against the approval record.

Controls and Exceptions

- Content should not be published by the same person who authored it without independent review, where policy requires segregation.
- Urgent/emergency content changes still require at least one reviewer sign-off, logged retrospectively if necessary.
- Approval history should not be editable after publishing.

Checklist

✓	Check Point	Status / Remarks
☐	Content submitted in Draft status.	
☐	Technical review completed.	
☐	Content/brand review completed.	
☐	Approval recorded before publishing.	
☐	Approval history logged.	
☐	Periodic audit of published content completed.	

SOP 09: SEO & Metadata Management

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-09	Process Owner	Website Administrator / Marketing Team
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Ensure website pages are optimised for search visibility through consistent metadata and technical SEO practices.

Scope

Meta titles/descriptions, sitemap.xml, robots.txt, URL structure, structured data, image alt text.

Roles and Responsibilities

Role	Responsibility
Website Administrator	Maintains SEO configuration.
Marketing Team	Defines target keywords and approves metadata.

Prerequisites

- Approved keyword strategy/target pages are defined.

Procedure

- Set meta title and meta description for each published page per the approved keyword strategy.
- Verify the auto-generated sitemap.xml includes all published pages.
- Review robots.txt to confirm intended pages are crawlable and sensitive pages are blocked.
- Ensure URL slugs are descriptive, lowercase and hyphen-separated.
- Add alt text to all images for accessibility and SEO.
- Verify structured data/schema markup where configured (e.g. for products, articles).
- Submit the updated sitemap to search engine consoles after major content changes.
- Review SEO performance (rankings, organic traffic) periodically with Marketing.

Controls and Exceptions

- Meta titles/descriptions must stay within recommended character limits to avoid truncation.
- Do not block search engines from indexing live public pages by mistake in robots.txt.
- Duplicate meta content across pages should be identified and corrected.

Checklist

✓	Check Point	Status / Remarks
☐	Meta title/description set per page.	
☐	Sitemap includes all published pages.	
☐	Robots.txt reviewed and correct.	
☐	URL slugs follow convention.	
☐	Image alt text present.	
☐	SEO performance reviewed periodically.	

SOP 10: Website User & Portal Access Management

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-10	Process Owner	Website Administrator
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Ensure website/customer portal user accounts are created, verified and deactivated in a controlled manner.

Scope

Website user sign-up, portal login access, role-based visibility of portal content.

Roles and Responsibilities

Role	Responsibility
Website Administrator	Manages portal user accounts and roles.
IT/System Administrator	Manages authentication/security settings.
Department Owner	Confirms portal access requirements for their users.

Prerequisites

- Approved portal access policy exists.
- Email/authentication provider is configured.

Procedure

1. Verify new website/portal sign-up requests against the approved access policy.
2. Confirm email verification is completed before granting full portal access.
3. Assign the correct role/permission level for portal content visibility.
4. Configure password policy and enable two-factor authentication where required.
5. Review the portal user list periodically for inactive or unauthorized accounts.
6. Deactivate portal access promptly when access is no longer required.
7. Investigate and respond to reported unauthorized access attempts.

Controls and Exceptions

- Portal access should not be granted without email verification or approval where policy requires it.
- Inactive portal accounts should be reviewed and deactivated periodically.
- Password/authentication settings must meet the organisation's security baseline.

Checklist

✓	Check Point	Status / Remarks
☐	Sign-up requests verified against policy.	
☐	Email verification completed.	
☐	Correct role/permission assigned.	
☐	Password/2FA policy applied.	
☐	Inactive accounts reviewed.	
☐	Unauthorized access investigated.	

SOP 11: Website Approval Matrix

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-11	Process Owner	Website Administrator
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Ensure web page, blog, product and form publishing follow a defined authority matrix.

Scope

Approval hierarchy for content creation, publishing, unpublishing and structural changes.

Roles and Responsibilities

Role	Responsibility
Website Administrator / Admin	Maintains and publishes the approval matrix.
Marketing / Process Owner	First-level content approver.
IT/System Administrator	Approver for domain/SSL/security-related changes.

Prerequisites

- Organisation approval hierarchy is defined and documented.
- System role/permission configuration matches the approved matrix.

Procedure

1. Document the approval matrix for each content/change type (page, blog, product, form, domain/SSL).
2. Configure system roles/permissions to reflect the approved matrix.
3. Test each approval workflow with sample content before go-live.
4. Publish the matrix to Content Authors, Website Administrators and department owners.
5. Review the matrix periodically for role changes (new joiners, transfers, exits).
6. Update permissions immediately when an approver role changes.
7. Audit a sample of published content periodically against the published matrix.

Controls and Exceptions

- Direct publishing should not bypass the configured approval workflow.
- Approver access must be removed promptly on role change or exit.
- Matrix changes require Admin/Marketing sign-off and version control.

Checklist

✓	Check Point	Status / Remarks
☐	Approval matrix documented and current.	
☐	System permissions match matrix.	
☐	Workflow tested end-to-end.	
☐	Matrix published to stakeholders.	
☐	Approver changes updated promptly.	

✓	Check Point	Status / Remarks
☐	Periodic audit completed.	

SOP 12: Website Analytics & Monitoring

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-12	Process Owner	Website Administrator / Marketing Team
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	Weekly / Monthly	Classification	Internal Use

Purpose

Provide reliable, timely visibility into website traffic, performance and uptime.

Scope

Traffic analytics, page performance, uptime monitoring, form submission tracking, broken-link checks.

Roles and Responsibilities

Role	Responsibility
Website Administrator	Monitors uptime and technical performance.
Marketing Team	Reviews traffic and engagement analytics.
IT/System Administrator	Monitors hosting/server performance.

Prerequisites

- Analytics tool (e.g. Google Analytics) is integrated.
- Uptime monitoring is configured.

Procedure

1. Review website traffic analytics (visitors, page views, bounce rate) on the agreed cadence.
2. Review top-performing and underperforming pages for content optimisation.
3. Monitor website uptime and page load speed against agreed thresholds.
4. Run periodic broken-link and image checks across the site.
5. Review Web Form submission volumes and conversion rates.
6. Investigate sudden traffic drops or spikes for root cause.
7. Share a monthly performance summary with Marketing/Management.
8. Log and track resolution of any performance/uptime incidents.

Controls and Exceptions

- Significant uptime or performance incidents must be logged with root cause and resolution.
- Analytics data shared externally should be reviewed for accuracy first.
- Broken links/images identified must be fixed within an agreed SLA.

Checklist

✓	Check Point	Status / Remarks
☐	Traffic analytics reviewed on cadence.	
☐	Page performance reviewed.	
☐	Uptime/load speed monitored.	
☐	Broken-link check completed.	
☐	Form submissions reviewed.	
☐	Monthly summary shared.	

SOP 13: Website Exception & Troubleshooting

Document	QBS Website Module SOP Manual	Version	1.0
SOP Code	QBS-WEB-13	Process Owner	Website Administrator
Effective Date	To be approved	Review Cycle	Annual / on major system change
Frequency	As required	Classification	Internal Use

Purpose

Provide a consistent method for diagnosing and resolving Website Module issues.

Scope

Page not rendering, broken links, form submission failures, SSL/domain errors, slow page load.

Roles and Responsibilities

Role	Responsibility
Website Administrator	Triages and resolves content/configuration issues.
IT/System Administrator	Investigates hosting/domain/SSL/server issues.
Content Author	Reports content-related issues.

Prerequisites

- Issue description, affected page/URL and date/time are captured.
- Recent content or configuration changes are known.

Procedure

1. Classify the issue: content, configuration, domain/SSL, form/integration, or performance.
2. For a page not rendering, check publish status and recent content edits.
3. For broken links, trace the source page and correct or redirect the link.
4. For form submission failures, verify field configuration and notification routing.
5. For domain/SSL errors, verify DNS records and certificate validity.
6. For slow page load, check image sizes, caching and hosting resource usage.
7. Test the fix against the original scenario before closing the issue.
8. Record root cause, corrective action and preventive action for recurring issues.

Controls and Exceptions

- Do not proceed to direct content/configuration correction before the root cause is understood.
- Preserve evidence (screenshots, error logs) before reprocessing.
- Domain/SSL changes should be made in a maintenance window to avoid downtime.

Checklist

✓	Check Point	Status / Remarks
☐	Issue and affected page/URL captured.	
☐	Root cause classified.	
☐	Content/configuration/domain verified as applicable.	
☐	Fix tested on original scenario.	

✓	Check Point	Status / Remarks
☐	Root cause and preventive action documented.	

Master QBS Website Module Go-Live / Periodic Control Checklist

Area	Control Check	Status	Remarks / Owner
Setup	Website Settings and branding configured	☐	
Setup	Domain mapped and SSL certificate valid	☐	
Content	Web Pages reviewed and approved before publishing	☐	
Content	Blog Category structure and content calendar in place	☐	
Forms	Web Forms tested end-to-end with correct notification routing	☐	
Forms	Spam protection enabled on public forms	☐	
Product Publishing	Only approved items published to website	☐	
Product Publishing	Pricing reconciled with approved price list	☐	
Governance	Content approval workflow tested and enforced	☐	
SEO	Meta titles/descriptions set for all published pages	☐	
SEO	Sitemap and robots.txt verified	☐	
Portal Security	Portal user roles and access reviewed	☐	
Portal Security	Inactive portal accounts deactivated	☐	
Operations	Uptime and performance monitoring configured	☐	
Operations	Broken-link check performed periodically	☐	
Support	Issue escalation matrix and support contacts published	☐	
Support	Domain/SSL renewal tracking log maintained	☐	
Governance	SOP training completed for content authors and admins	☐	

Monthly Website Control Sign-off

Control	Owner	Status	Remarks
Content review/approval log audited	Website Administrator	☐	
Web Form submissions cleared/actioned	Department Owners	☐	
SSL/domain renewal status checked	IT/System Administrator	☐	
Website analytics reviewed	Marketing Team	☐	
Broken-link/performance check completed	Website Administrator	☐	
Inactive portal users reviewed	Website Administrator	☐	
Recurring incidents reviewed for RCA/CAPA	Website Administrator / IT	☐
